

I Think that XM Instant Traffic and Weather channels are a great thing to Xm Listener. They give up to the minute traffic and weather info. Making it easier to go to work and home from work. If there is a traffic problem on one of the roads it put less traffic on that road by taking a different way, you get that info up to the minute. you get up to the minute weather info in case of bad weather. On the radio it may be 10 minutes or so. And all those Commercials that you have to listen too.No body wants to listen to all those commercial since we pay for our Xm Radio service. The Xm radio music is so nice to listen to with no commercials and the kind of music that you like. I live up in Northern NH and most of the radio stations are the same country or rock.Its nice to listen to what you want to. There are not that many station here. With Xm radio There are 100s of Stations. I pay for these service and it not up to the NAB to dictate to what I listen to . Sure the NAB is losing people you listen to broadcast radio but there will all ways be people you do listen. I am a ham Radio person and I still listen to broadcast radio. I would like to see NAB's Petition 04-160 rejected . Kevin Bennett
